Agenda

1 Why Oku Slides 3

2 How it works 8

1

Why Oku Slides

Slides are mostly layout work

The problem

Less layout, more ideas

- Aligning, resizing and restyling eat most of the time spent on a deck.
- Keeping twenty slides consistent is tedious and error-prone.
- Decks end up locked in formats and clouds you don't control.

Mission

Three ideas

Idea 1

Hands-free slides

- Speak; the agent does the layout
- Edit by hand whenever you like

Idea 2

Open, portable decks

- A PDF any viewer opens
- Sources inside: still editable

Idea 3

Software as a harness

- Bring your own agent
- The app keeps you in control

Software as a harness

> The app is the stable, well-tested part; the agent is interchangeable. As agents improve, Oku Slides improves with them.

Guardrails

What the harness guarantees

- **Narrow tools:** only through the app's own tools, never your files or terminal.
- **Everything undoes:** a whole agent turn is a single ⌘Z.
- **You confirm:** saving, deleting and settings wait for your yes, by click or by voice.
- **Decisions stay yours:** questions in place, variants side by side.

Bring your own agent

Any ACP agent

- Claude, Codex, Gemini preconfigured
- A built-in local agent: no account, no network

2

How it works

From your voice to a finished slide

Workflow

From voice to slide

1. Press ⌘D and speak; dictation runs on your computer.
2. Review the draft, fix it or keep talking.
3. Send it to the agent with ⌘↩.
4. The agent edits the deck; ⌘Z undoes the whole turn.

Features

What's inside

Feature	What you get
Dictation	Apple's engine or Whisper, on device
Agent	Any ACP agent, one undo per turn
File	A PDF that stays editable, with full history
Import	PowerPoint, faithful or remapped to your layouts
Design	Layout packs, themes, Typst widgets
Languages	20 interface languages

Your decks are PDFs.

Open them anywhere. Edit them in Oku Slides.

Say it. See it.
